

Perturbaciones Significativas : Yaiza

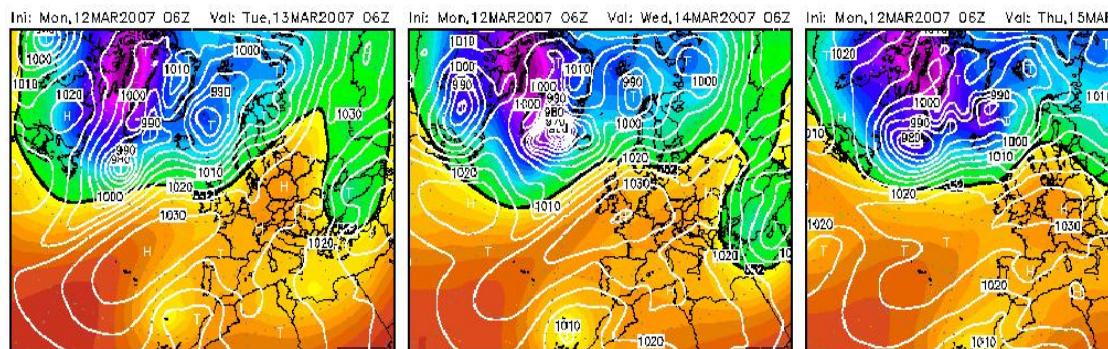

Perturbaciones Significativas- 2006-2007.
CPS-- Acanmet

Yaiza

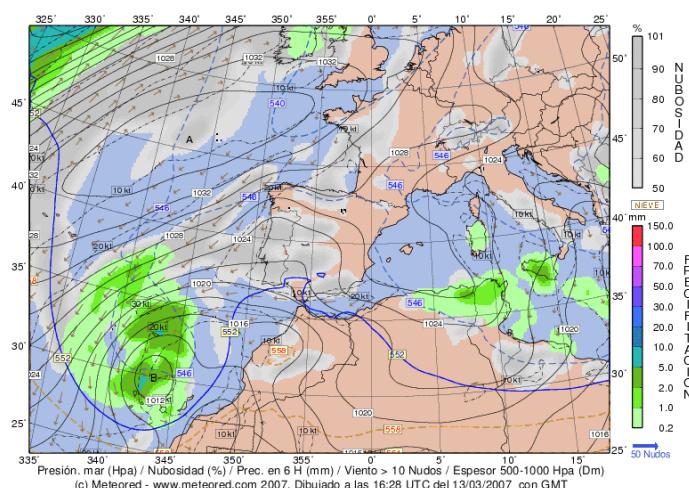

13-15 de marzo

Depresion Aislada en Niveles Altos que se descuelga desde el NW, sobre las islas obteniendo debil reflejo en SFC. Origina espectaculares tormentas el dia 14 de marzo en el area metropolitana de las Palmas y en la noche del 14 al 15 en el N y E de TF y en la Gomera.

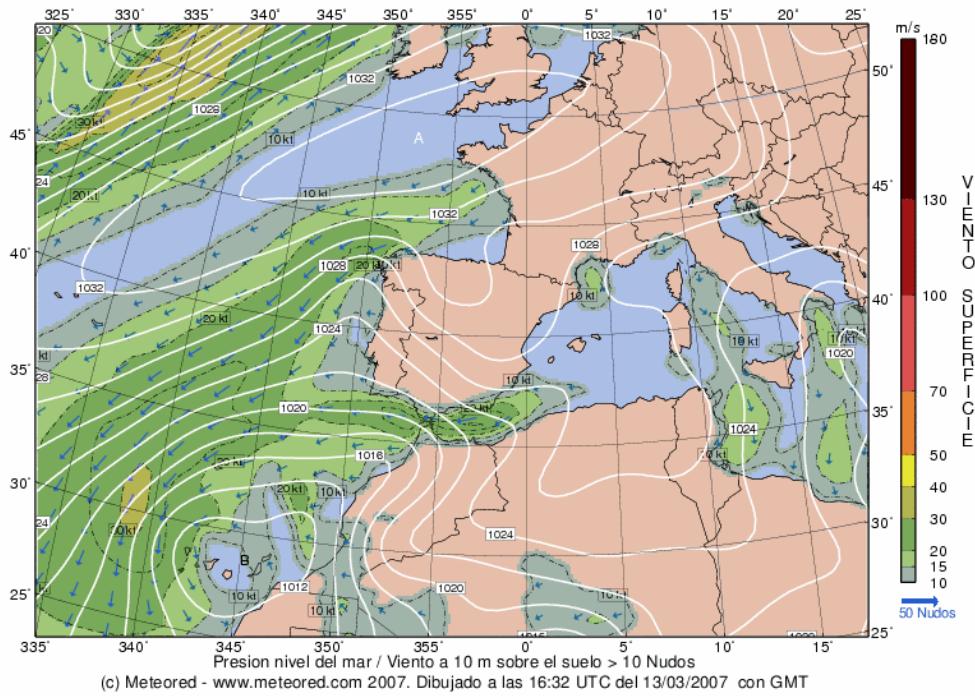

Evolucion de la DANA sobre las islas, salida del GFS del lunes 7 de marzo a las 06z.
Campos e imágenes dia 13 de marzo.

Modelo GFS. 12 UTC del 13/03/2007. Pronóstico válido a las 18 UTC del Mar. 13/03/2007 (H+ 6)

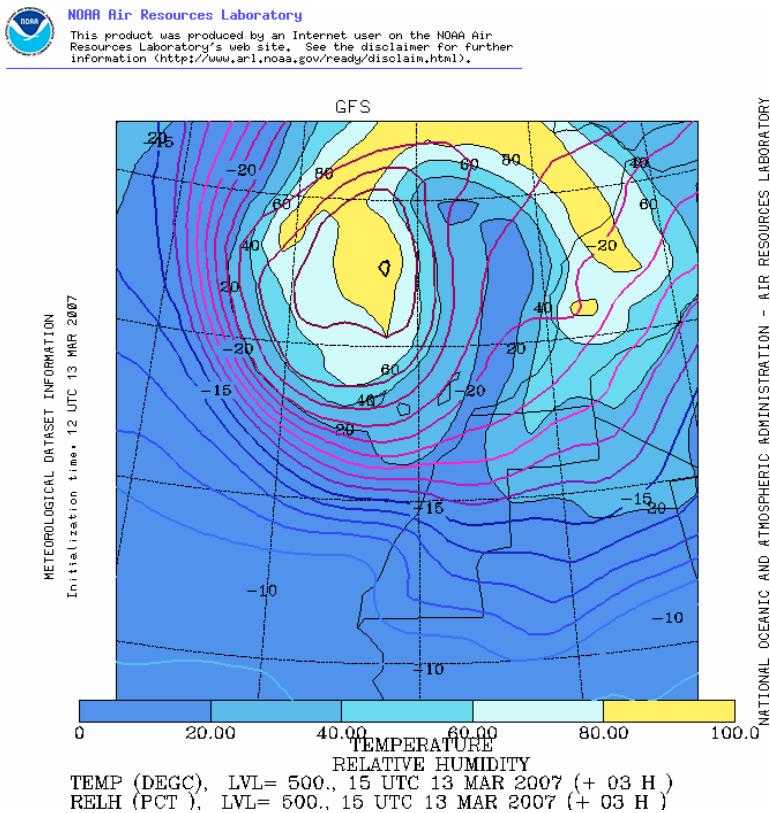

Perturbaciones Significativas : Yaiza

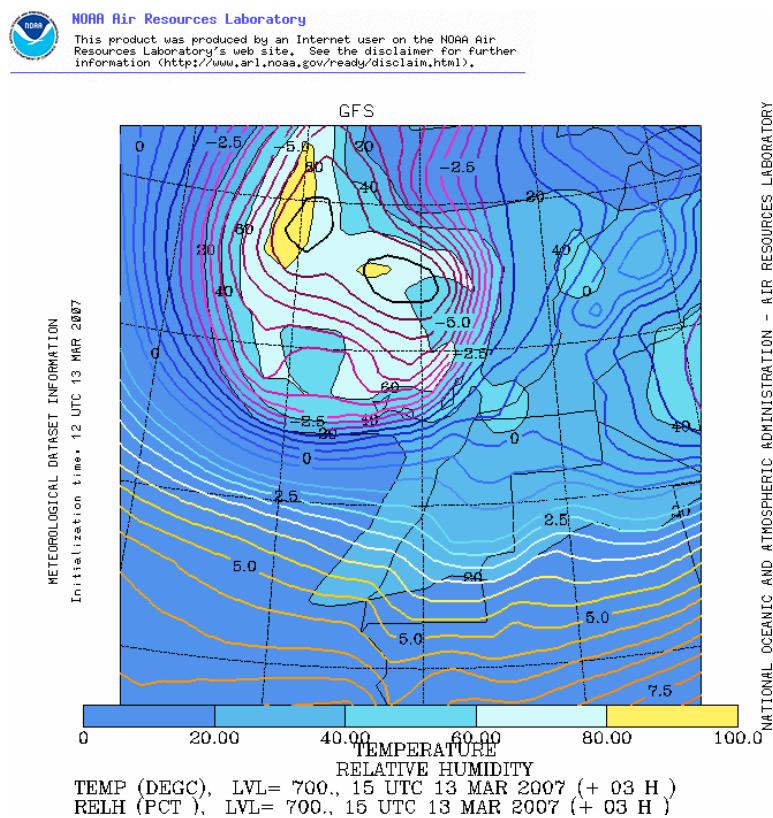

Modelo GFS. 12 UTC del 13/03/2007. Pronóstico válido a las 06 UTC del Wed. 14/03/2007 (H+18)

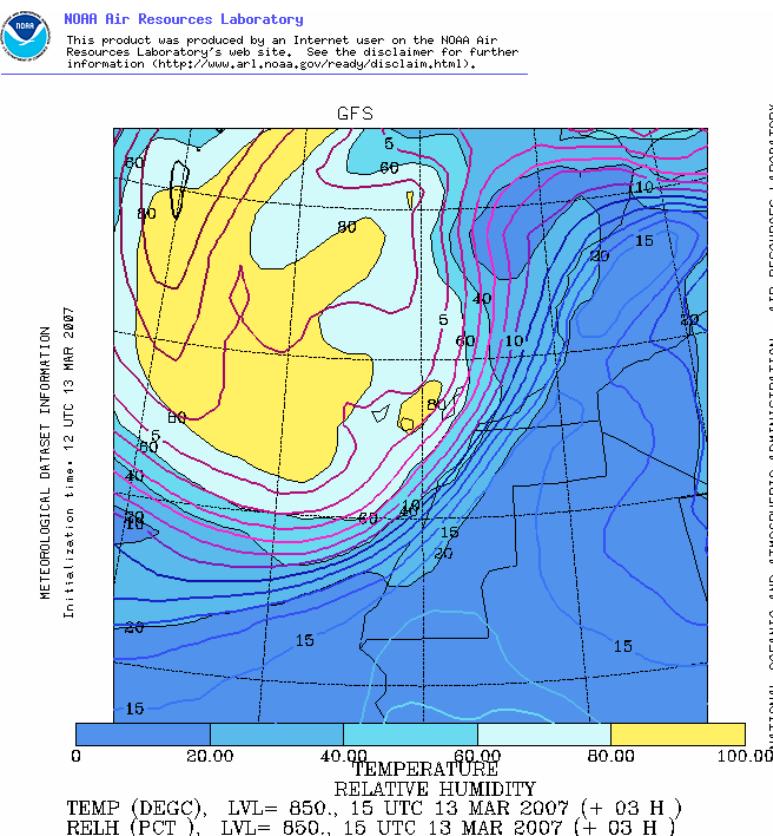

La baja , reflejada en SFC con 1012 mb se encuentra en la madrugada del miércoles 14 justamente sobre las islas.

Perturbaciones Significativas : Yaiza

Temperatura y humedad en 700 hp, salida del 13 de marzo, predicción a +3h. Abajo idem en la cota de 850 hp.

Perturbaciones Significativas : Yaiza

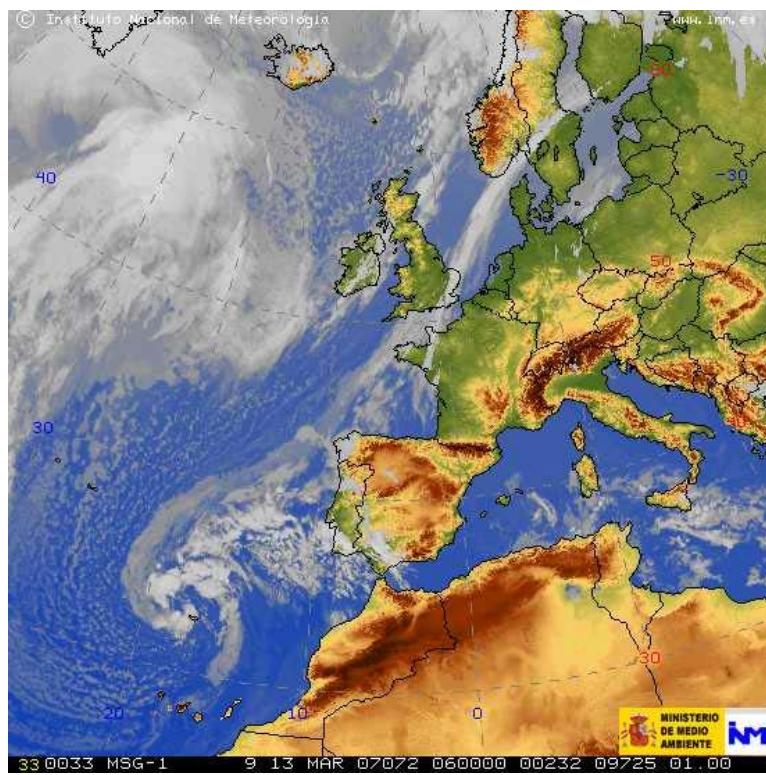

Imagen Infrarroja en la que se muestra la perturbación iniciando su descuelgue sobre las islas.

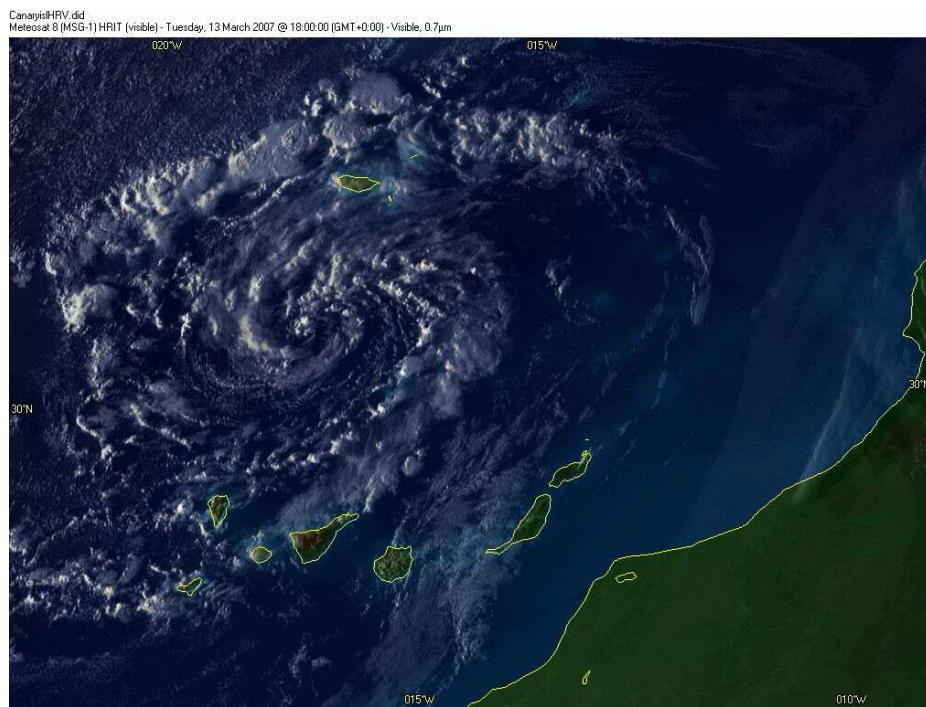

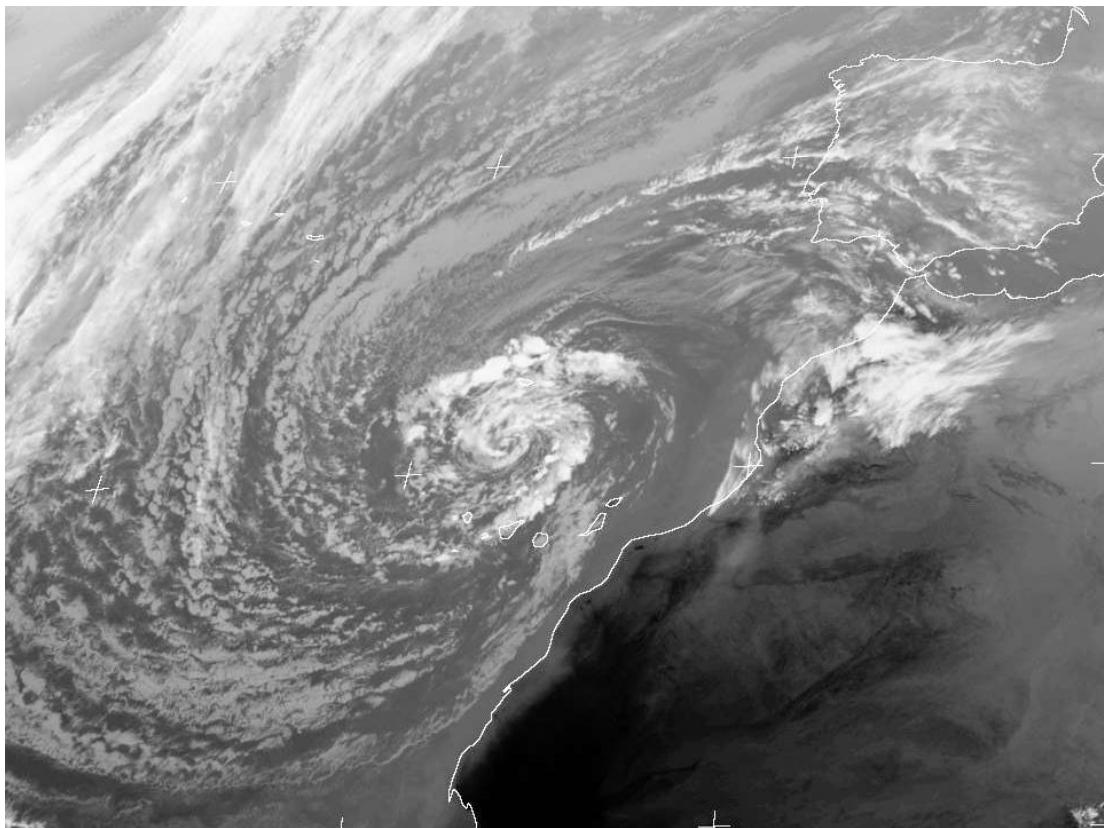

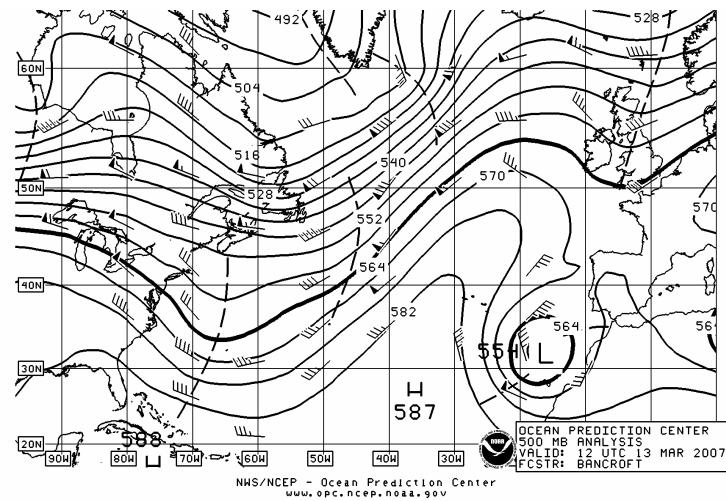

Imagen de visible el martes 13 a las 18h, observe el debil frente que afecta las occidentales.

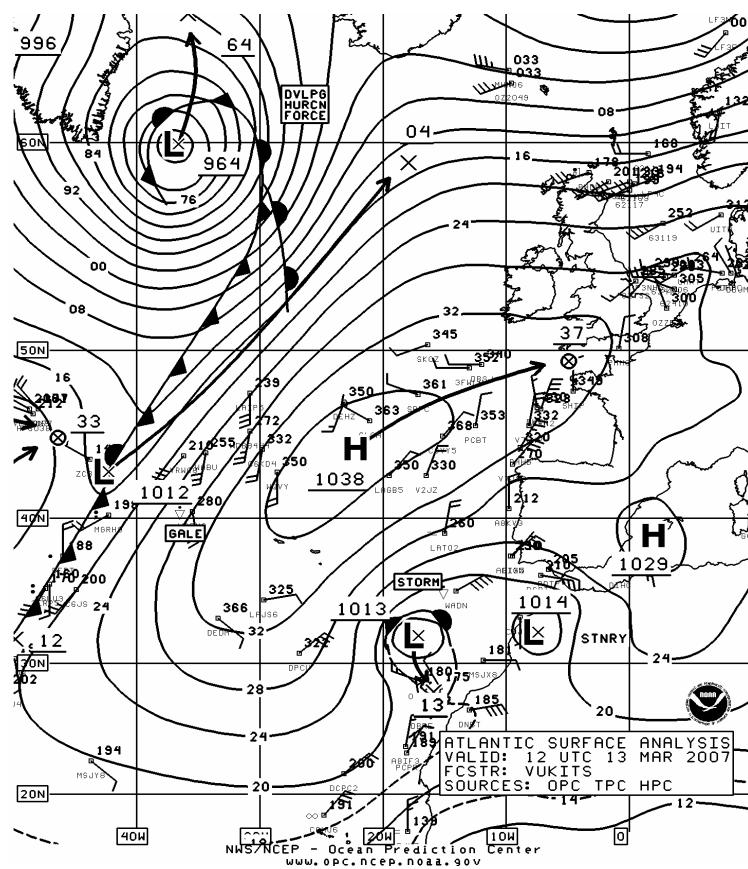

Perturbaciones Significativas : Yaiza

Perturbaciones Significativas : Yaiza

Topografia del NOAA de la isohipsa de 500 hp, mostrando la situación de la baja al mediodía del martes 13.

Mapa de superficie y frentes, mostrando un sistema de bajas binarias .

Campos e imágenes miércoles 14 de marzo.

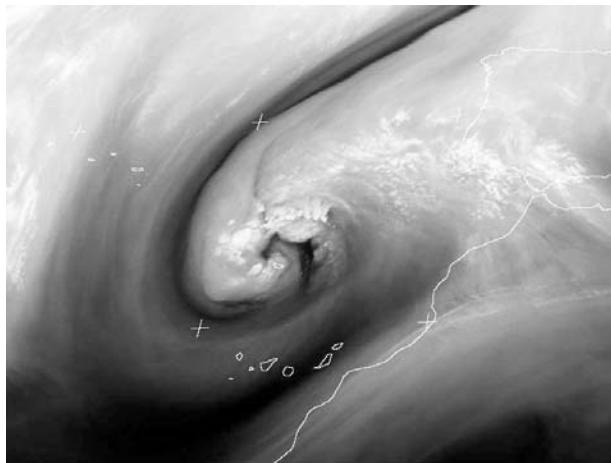

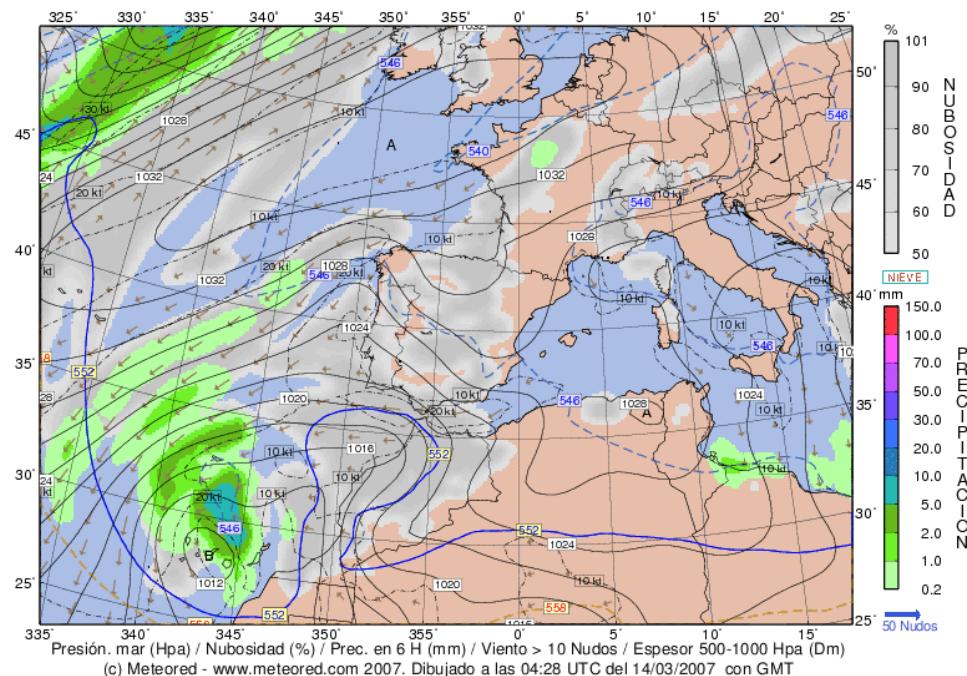

Imagen de vapor de agua de la perturbacion, acercandose a las islas.

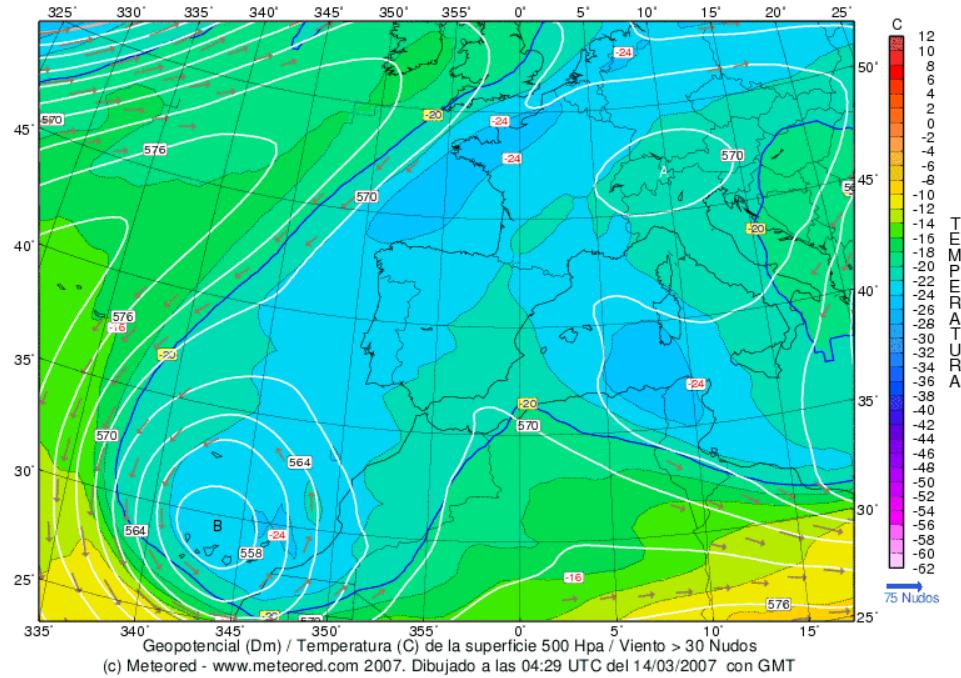

Modelo GFS. 00 UTC del 14/03/2007. Pronóstico válido a las 06 UTC del Mié. 14/03/2007 (H+ 6)

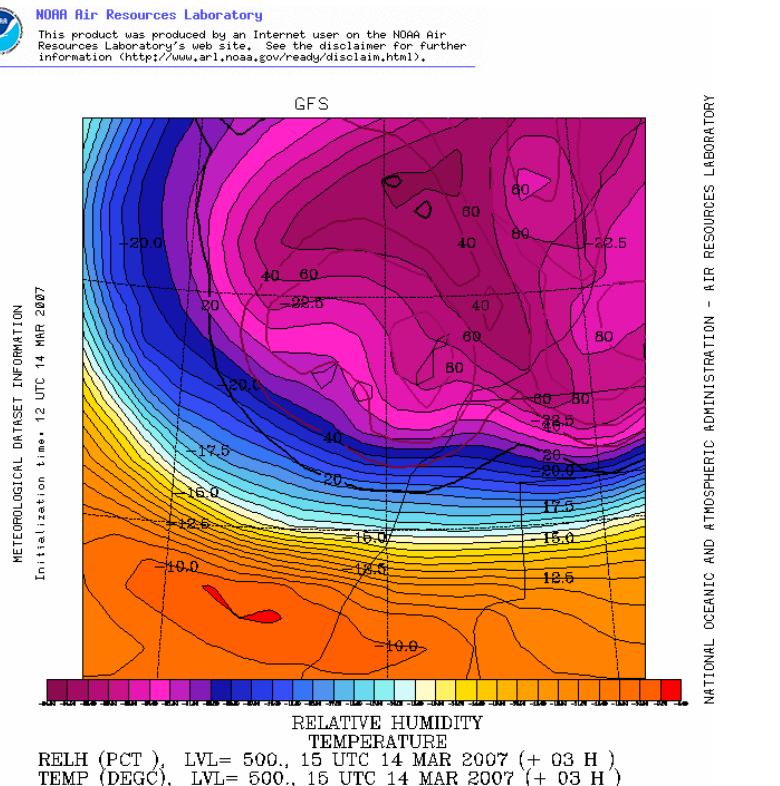

El miércoles de madrugada la baja esta centrada prácticamente sobre las islas centrales. El viento sera muy flojo del SW sobre GC, haciendo posibles los fenómenos a acontecer.

Perturbaciones Significativas : Yaiza

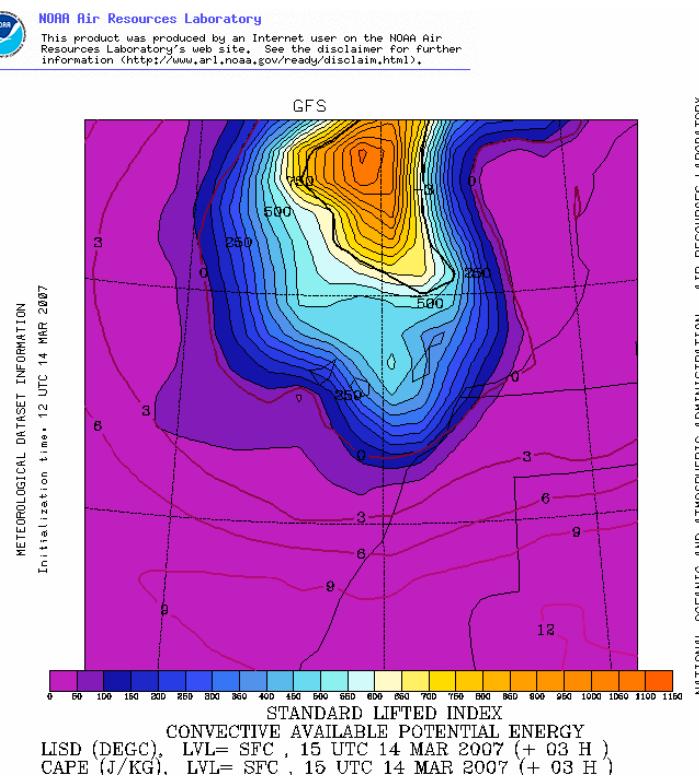

Modelo GFS. 00 UTC del 14/03/2007. Pronóstico válido a las 06 UTC del Wed. 14/03/2007 (H+ 6)

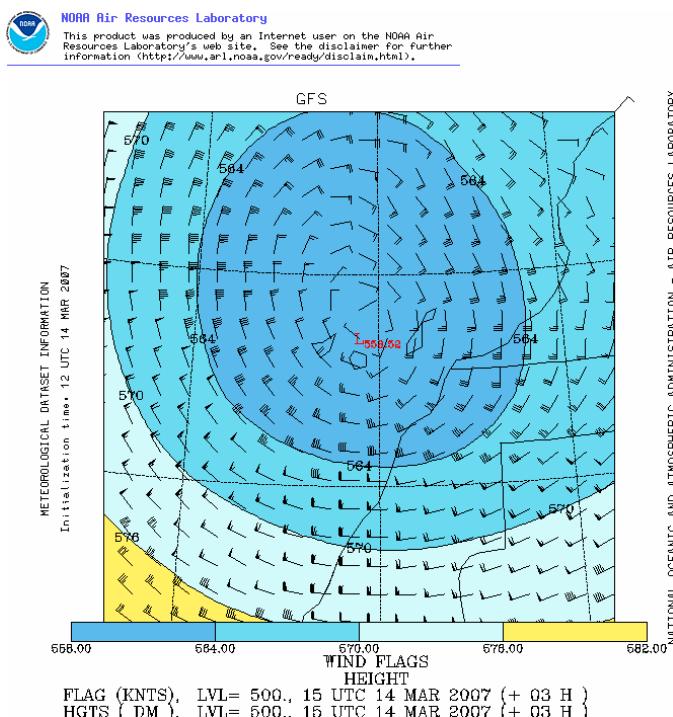

Mapas del nivel de 500 hp, con la baja acoplada a la depresión en SFC, miércoles a las 06 h. En 500 hp se alcanzan los -20 ° C.

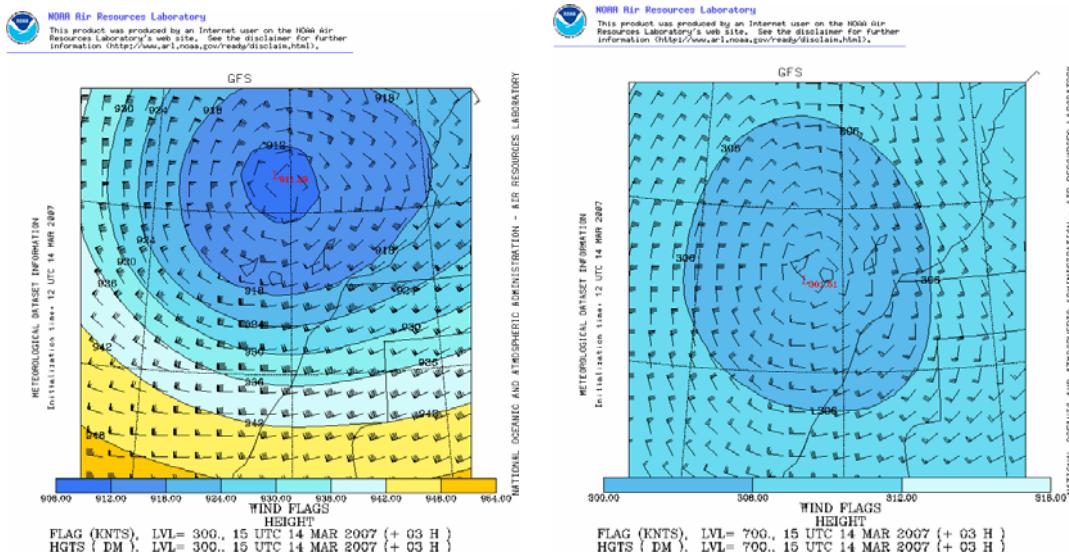

Perturbaciones Significativas : Yaiza

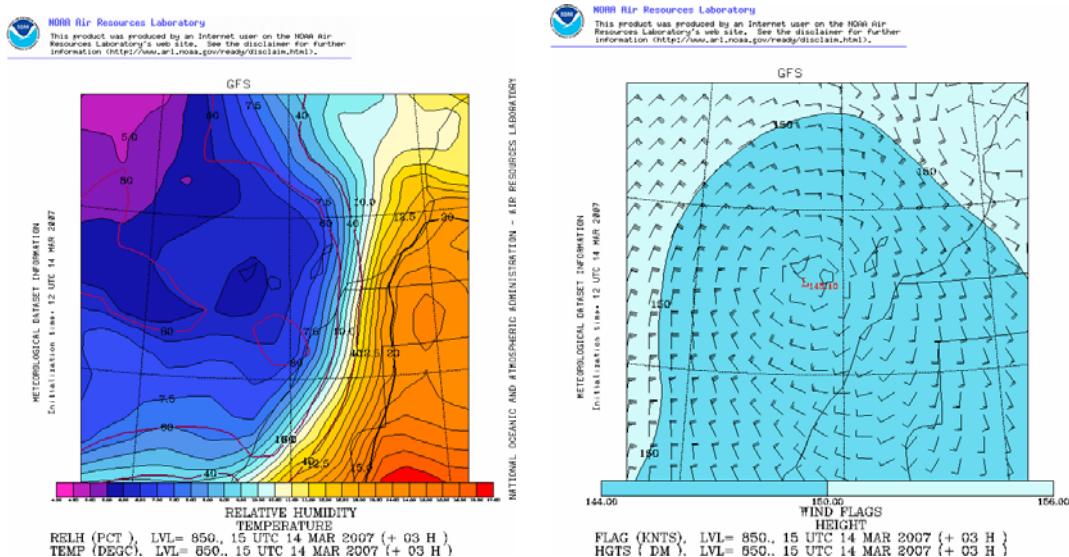

Distribución de los CAPES a las 15 h del dia 14, y mapa de Geopotencial en 500hp.

Perturbaciones Significativas : Yaiza

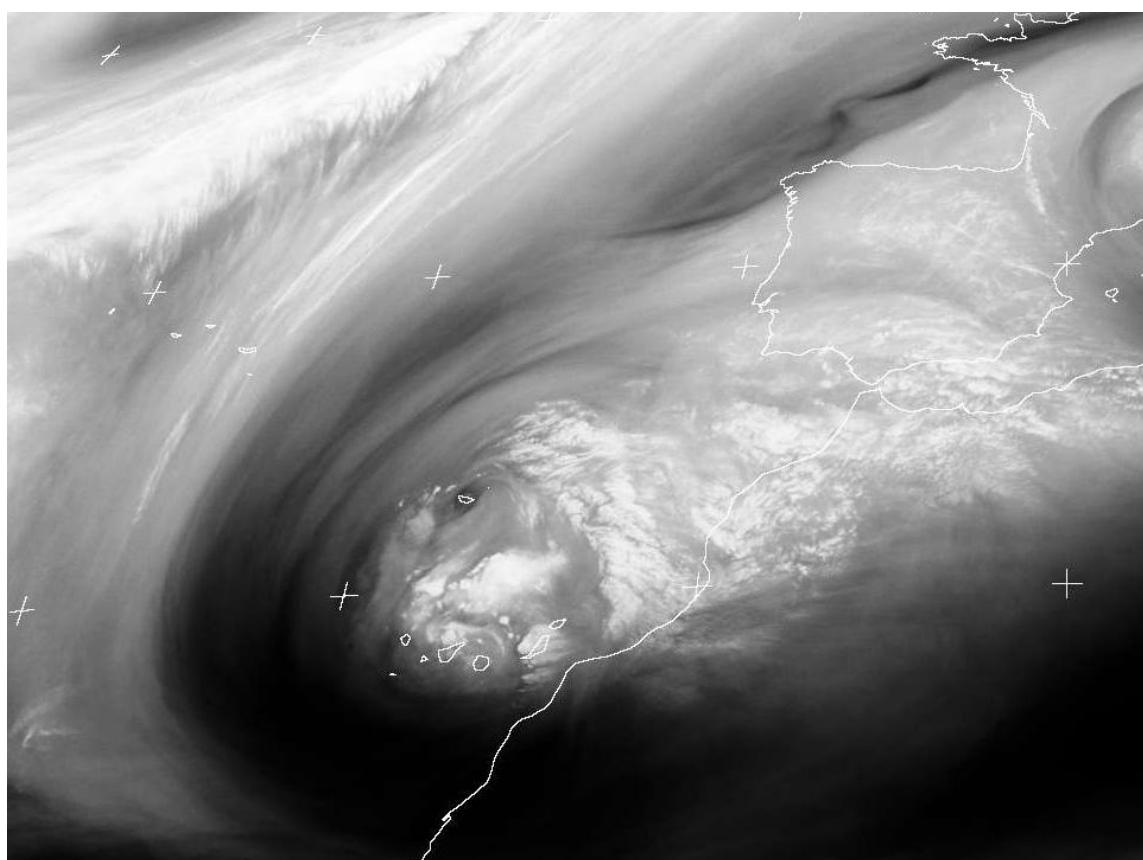

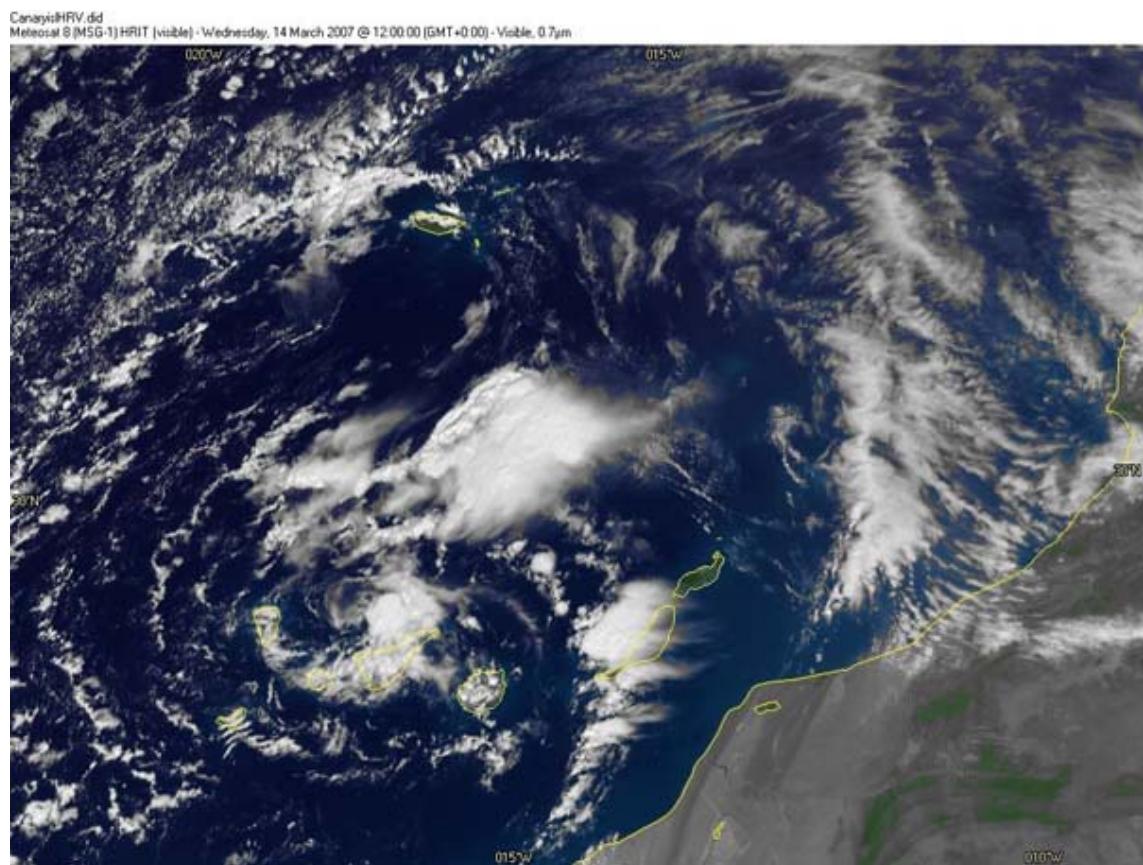

Campos de 300 hp y 700 hp, geopotenciales.

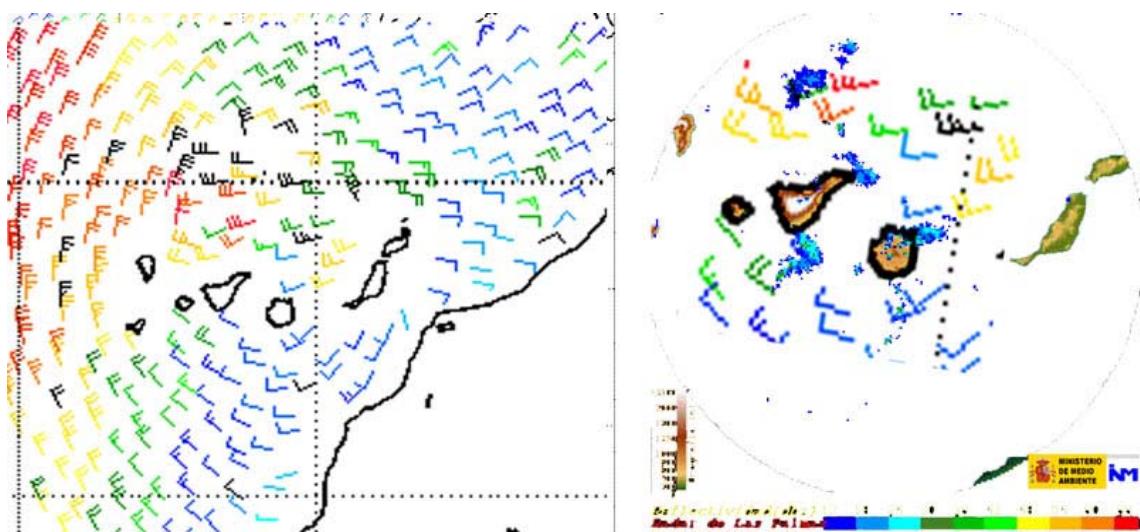

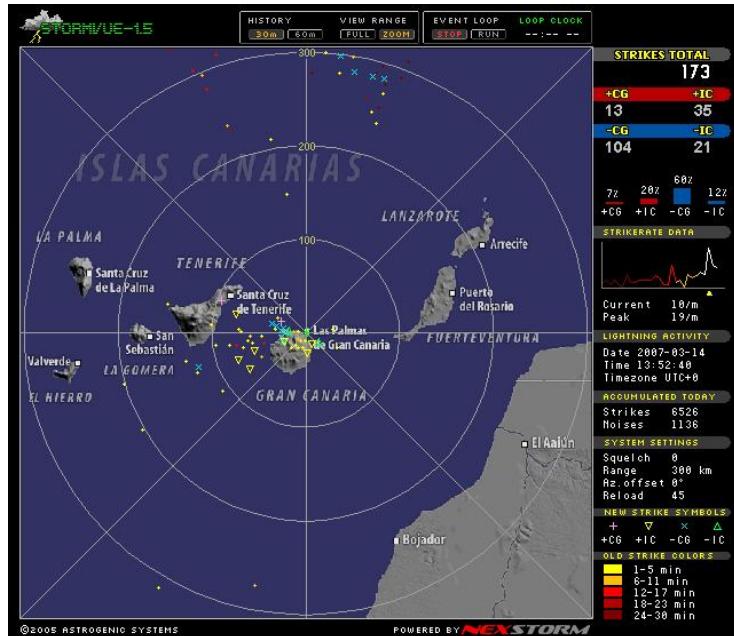

Campos de 850 hp, geopotencial, temperatura y humedad el mediodía del miércoles 14.

Perturbaciones Significativas : Yaiza

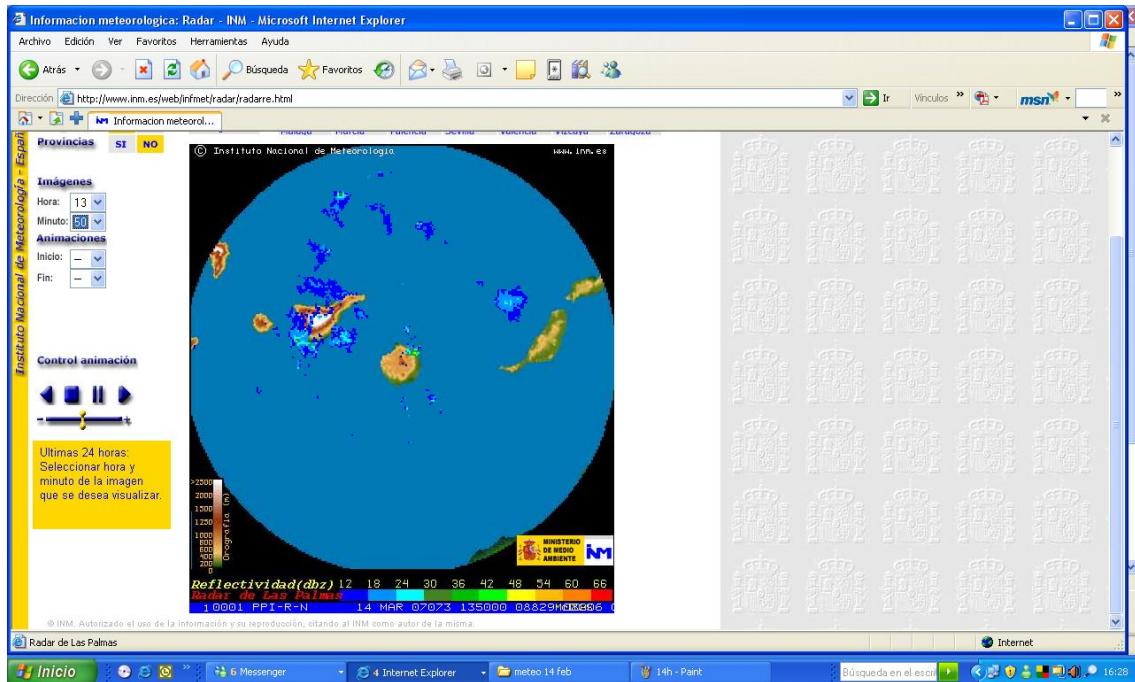

Perturbaciones Significativas : Yaiza

Imagenes visible y vapor de agua del miércoles a las 12h. Observese un gran núcleo tormentoso al N de TF, mientras que sobre GC comienzan a formarse activos CBS. Otra tormenta se debilita al W de FV. Abajo salida del detector de rayos de Acanmet.

Salida de dispersometria de vientos, asociada a los principales ecos que se reflejan en esos momentos (tormentas sobre las Palmas, Anaga y sur de TF.) Observese el papel de las convergencias a sotavento en la formación de las tormentas. Cortesía de Sergio Suarez-Acanmet.

Perturbaciones Significativas : Yaiza

Salidas de ecos de precipitación al mediodía del miércoles. Tormentas sobre el área metropolitana de las Palmas y N y SW de TF.

Momento en que se detectan el mayor numero de descargas sobre GC.

Con la baja en superficie sobre las islas de GC y TF, en fase con la depresion en altura hasta 500 hp, pronto los desarrollos por evolucion diurna se disparan por el S y N de estas islas desde la media mañana del miércoles 14.

A las 13 h un Cumulonimbo (ver imagen) comienza a formarse sobre la cumbre de GC, derivando lentamente , impulsado por una suave brisa del SW , hacia el N de esta isla, a la par que se organiza y expande. Alimentado por las brisas que convergen sobre la zona del puerto-isleta, origina un potente tormenta con gran aparato electrico que descarga cantidades de hasta 50 l en varios puntos del sur de la capital y afecta a toda la ciudad.

Posteriormente nuevas celulas se originan en la cumbre, afectando a las medianias de GC durante la tarde con sucesivas tormentas, que remiten a la caida de la noche. Mientras que en TF las tormentas se recrudecen a la caida de la noche, afectando a la zona metropolitana y el norte de la isla con gran espectáculo electrico.

Perturbaciones Significativas : Yaiza

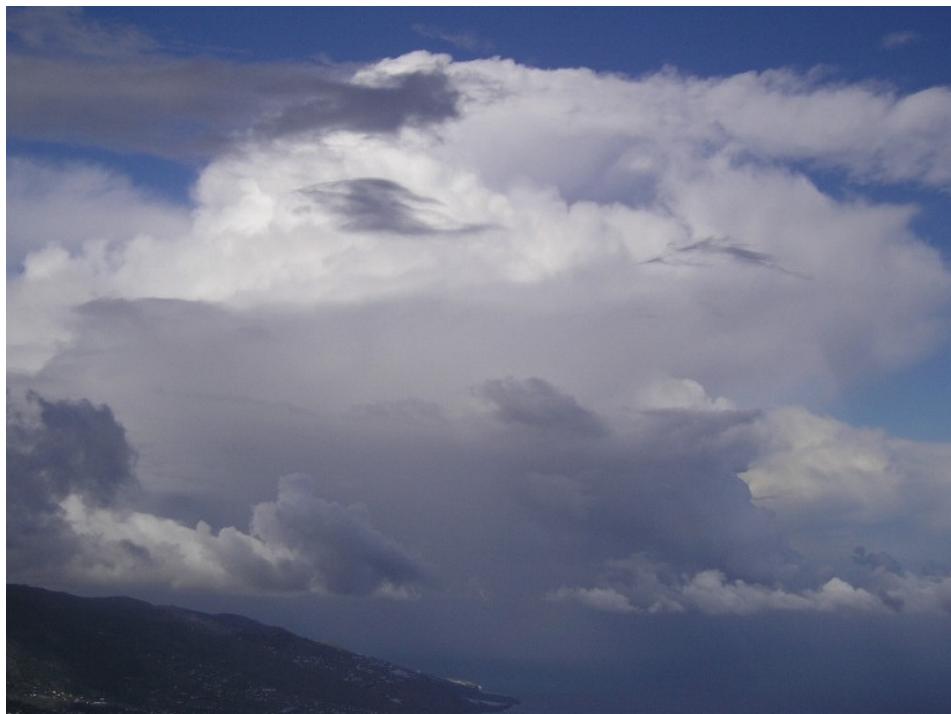

El CB aproximándose a la ciudad; debajo, desde la Isleta. (Canarias 7)

Perturbaciones Significativas : Yaiza

Descarga eléctrica en almatriche, mediodía del 14 de marzo, cortesía de Abian.
En pagina anterior, imagen de la llegada de la tormenta desde Tafira hasta la capital (imagen obtenida por la webcam en el diario Canarias7). Otro espectacular desarrollo abajo cerca de Santa Cruz de TF.

Perturbaciones Significativas : Yaiza

Impresionantes CBS se mueven al NE de la península de Anaga, por fortuna sin llegar a tocar la zona metropolitana de Santa Cruz.

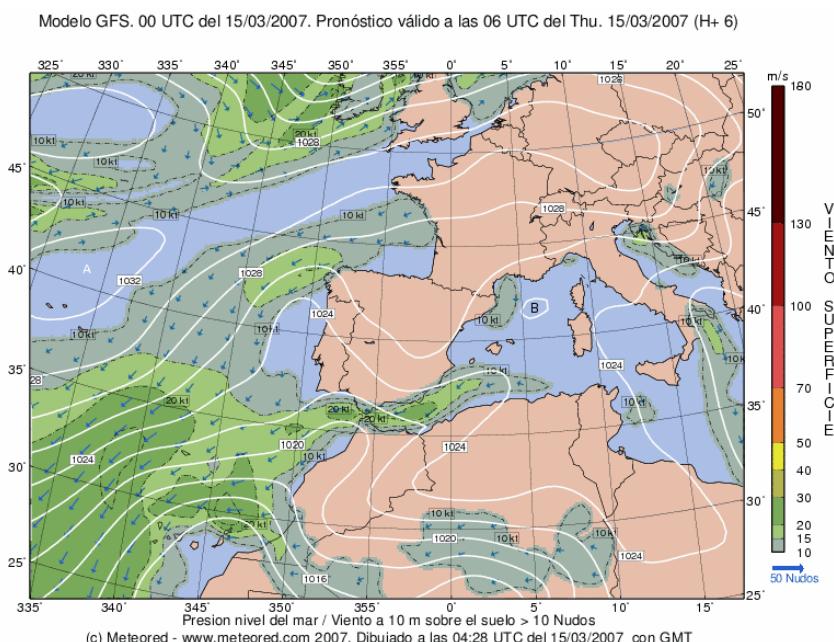

Efectos de la tormenta en las Palmas.

Perturbaciones Significativas : Yaiza

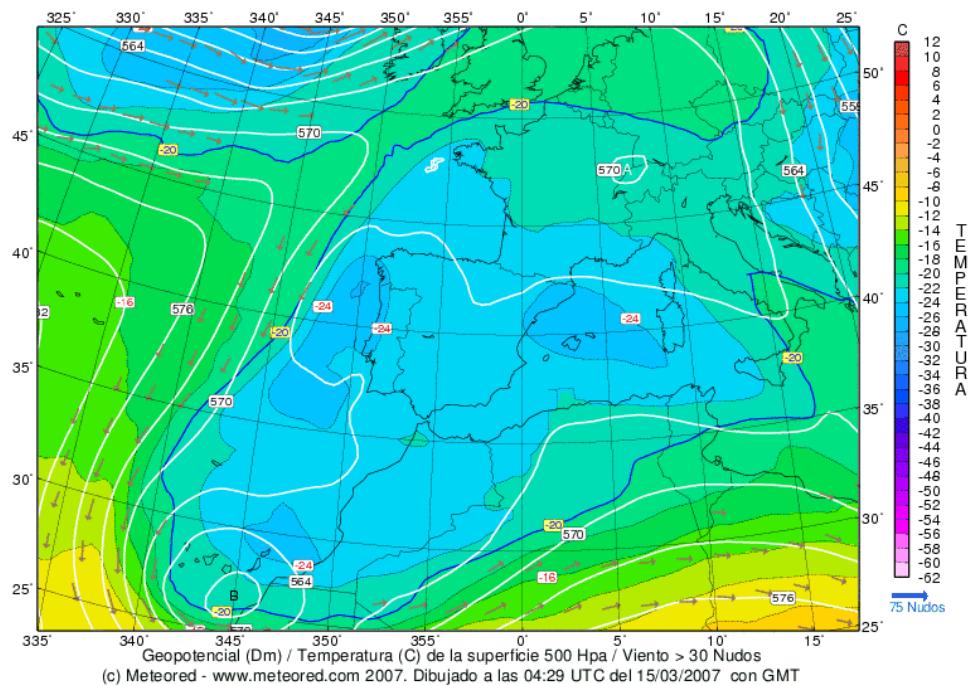

Nubosidad muy desarrollada sobre FV, (cortesía de Pedro)

Campos e imágenes – jueves 15 de marzo.

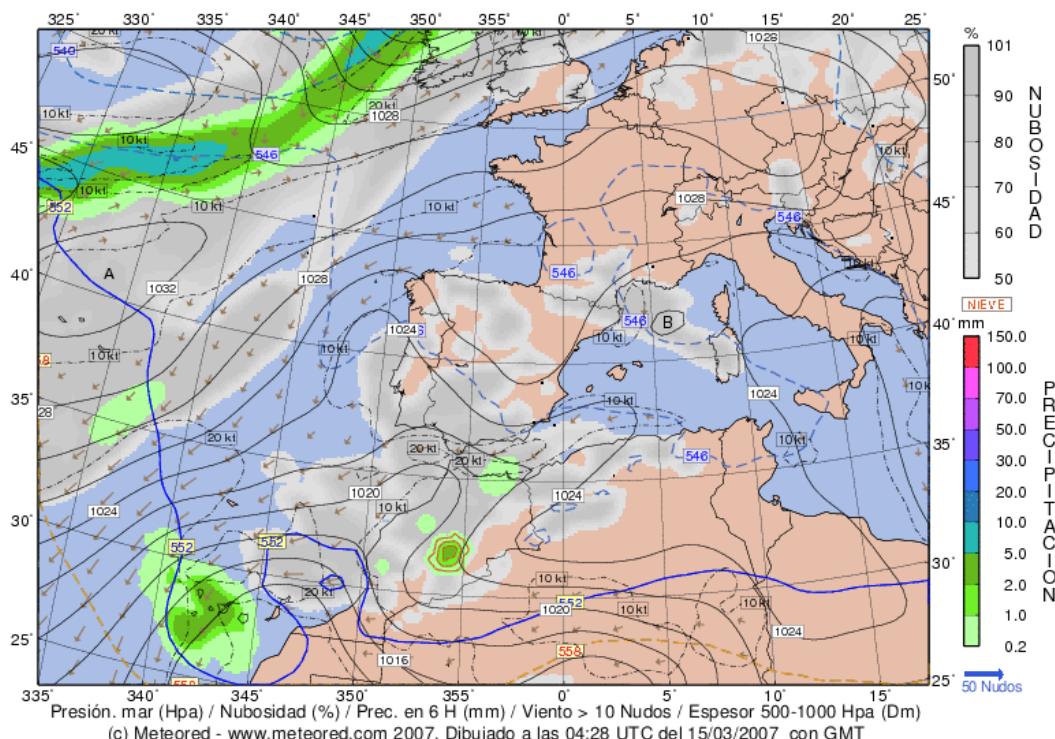

Perturbaciones Significativas : Yaiza

Modelo GFS. 00 UTC del 15/03/2007. Pronóstico válido a las 06 UTC del Thu. 15/03/2007 (H+ 6)

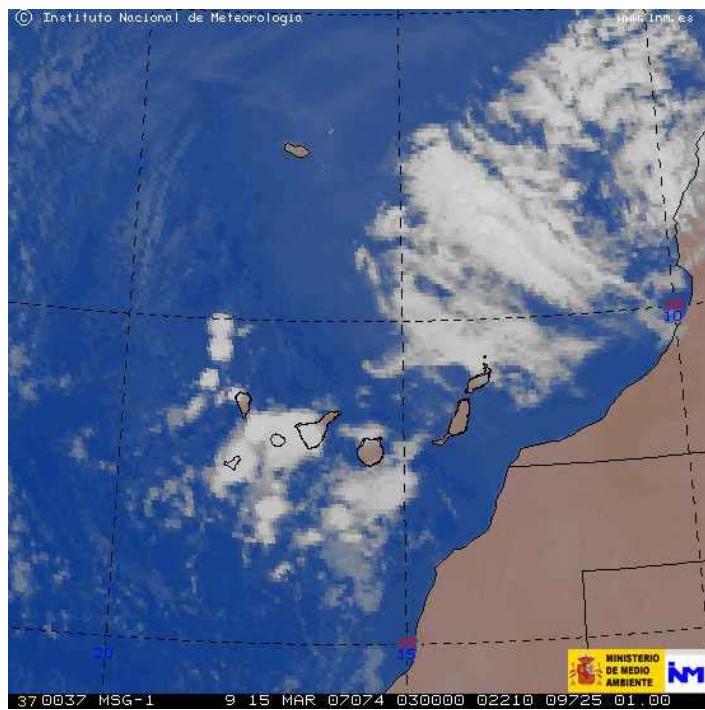

Modelo GFS. 00 UTC del 15/03/2007. Pronóstico válido a las 06 UTC del Jue. 15/03/2007 (H+ 6)

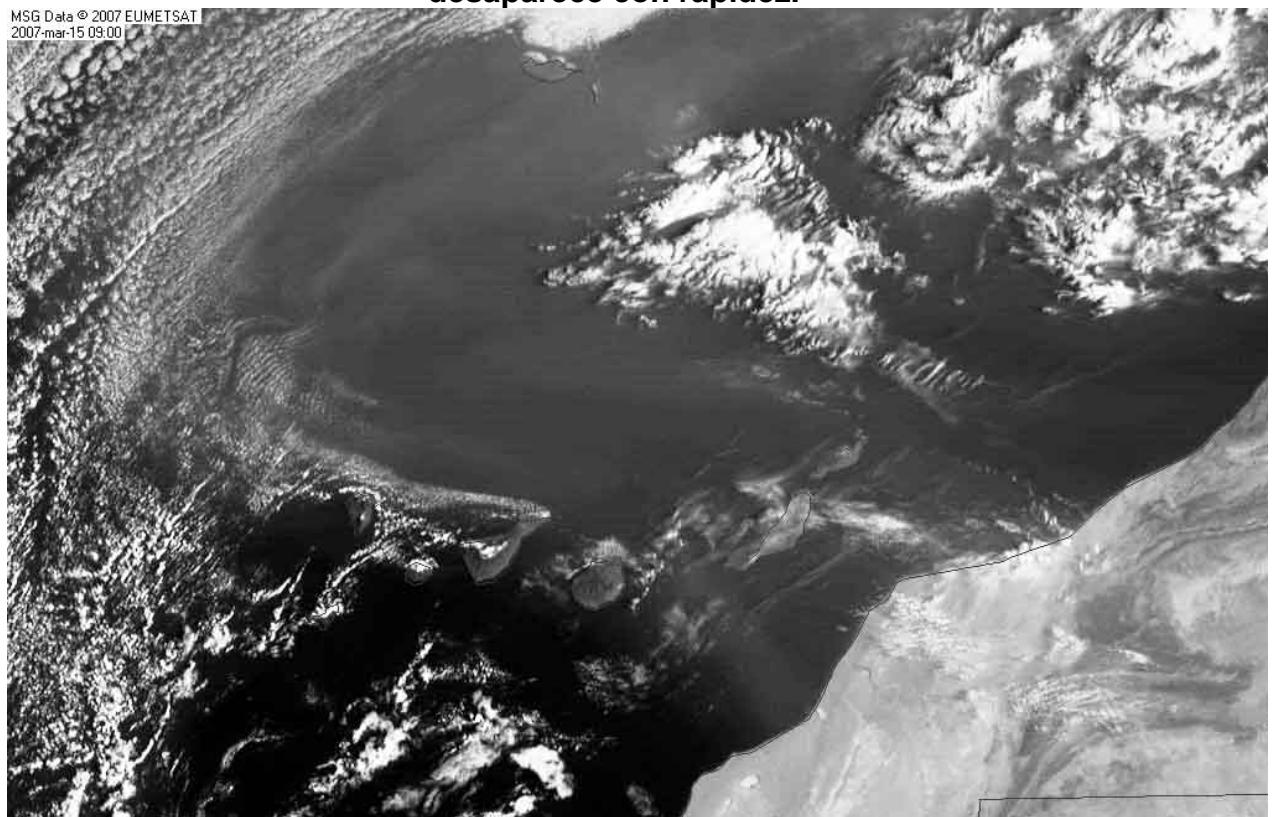

Algunos chubascos y tormentas se registran en las islas occidentales durante la madrugada. Durante la medianoche de forma inesperada el N de GC se ve afectada por una línea de tormentas, al igual forma que la Gomera.

Perturbaciones Significativas : Yaiza

Al mediodía del 15 , la baja succiona calima sobre las islas, y la nubosidad desaparece con rapidez.

RESUMEN

La perturbación “Yaiza” se considero significativa por:

- 1. Es un magnifico ejemplo de borrasca debil centrada sobre las islas ,con reflejo muy debil y presencia de temperaturas muy bajas en las capas medias –altas (Depresion Aislada en Niveles Altos- que por momentos llega a ser depresion en superficie). Esta circunstancia se mantiene por escasas horas (14 de marzo) pero determina los sectores mas afectados por las lluvias . Al dia siguiente el reflejo desaparece quedando una ondulación del E con la advección de calima subsiguiente.**
- 2. Es de gran interes tecnico la tormenta que se desata sobre el Area Metropolitana de las Palmas, con lluvia muy intensa y acumulados cercanos a los 50 l en la zona del cono sur, lo cual lleva a la comparación con la perturbación “ Gugoy” (ver ficha correspondiente en archivo) ocurrida en agosto de 2005. Debido a los factores locales que puedan explicar la ocurrencia de estos fenómenos y cuyo conocimiento puede ser de interes para las autoridades encargadas de la seguridad civil.**

Perturbaciones Significativas : Yaiza

Station information and sounding indices

Station number: 60018
 Observation time: 070313/1200
 Station latitude: 28.32

Perturbaciones Significativas : Yaiza

Station longitude: -16.38
 Station elevation: 111.0
 Showalter index: 1.56
 Lifted index: 1.63
 LIFT computed using virtual temperature: 1.45
 SWEAT index: 171.21
 K index: 30.60
 Cross totals index: 25.60
 Vertical totals index: 25.70
 Totals totals index: 51.30
 Convective Available Potential Energy: 3.58
 CAPE using virtual temperature: 4.27
 Convective Inhibition: -8.65
 CINS using virtual temperature: -7.61
 Equilibrium Level: 680.79
 Equilibrium Level using virtual temperature: 680.78
 Level of Free Convection: 811.73
 LFCT using virtual temperature: 811.30
 Bulk Richardson Number: 0.07
 Bulk Richardson Number using CAPV: 0.08
 Temp [K] of the Lifted Condensation Level: 279.38
 Pres [hPa] of the Lifted Condensation Level: 871.89
 Mean mixed layer potential temperature: 290.56
 Mean mixed layer mixing ratio: 6.89
 1000 hPa to 500 hPa thickness: 5506.00
 Precipitable water [mm] for entire sounding: 19.86

60018 Guimar-Tenerife Observations at 00Z 14 Mar 2007

Station information and sounding indices

Station number: 60018
 Observation time: 070315/0000
 Station latitude: 28.32
 Station longitude: -16.38
 Station elevation: 111.0
 Showalter index: 0.58
 Lifted index: -1.54
 LIFT computed using virtual temperature: -1.63
 SWEAT index: 184.40
 K index: 32.30
 Cross totals index: 26.10
 Vertical totals index: 26.10
 Totals totals index: 52.20
 Convective Available Potential Energy: 561.31
 CAPE using virtual temperature: 595.72
 Convective Inhibition: -5.15
 CINS using virtual temperature: -5.12
 Equilibrium Level: 311.78
 Equilibrium Level using virtual temperature: 311.77
 Level of Free Convection: 901.14
 LFCT using virtual temperature: 901.80
 Bulk Richardson Number: 28.90

Perturbaciones Significativas : Yaiza

Bulk Richardson Number using CAPV: 30.67
 Temp [K] of the Lifted Condensation Level: 284.33
 Pres [hPa] of the Lifted Condensation Level: 925.32
 Mean mixed layer potential temperature: 290.73
 Mean mixed layer mixing ratio: 9.10
 1000 hPa to 500 hPa thickness: 5509.00
 Precipitable water [mm] for entire sounding: 26.97

Description of the indices.
